

The hidden force **in healthcare.**

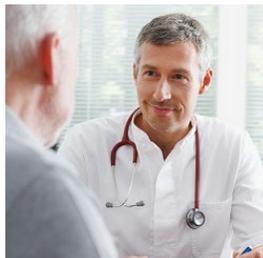

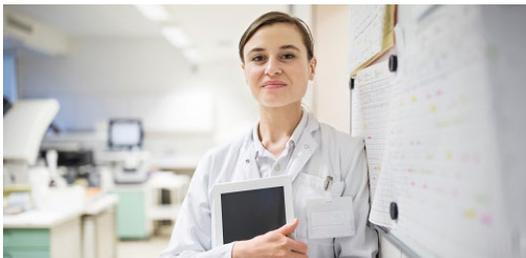

Effective, often unseen, security solutions 24 hours a day.

Access to quality healthcare is important in any community. Access to *safe* healthcare is vital. To ensure our hospitals, clinics and other patient-centric facilities are safe, Vector Security Networks delivers proven physical security and managed network solutions.

Because we work closely with you to determine the best solution for your facilities, the end result is a holistic health care security system that treats your facility as one interconnected entity, just as a doctor would treat a patient.

For more than 45 years, we have protected people and property by providing intelligent security solutions tailored to the needs of the customer. We design, install and monitor security and network solutions across the country for all types of healthcare facilities, including:

- Urgent care centers
- Dialysis centers
- Medical services facilities
- Healthcare systems
- Primary Care offices
- Senior Care communities

One source for many sites.

One Source Solutions means we offer complete security solutions — physical security and managed networks — for multi-site healthcare facilities. As a single-source provider, we focus on efficiencies, scalability and performance, giving holistic visibility and management control over all your facilities. Whether you have 20 locations or 1,000, our intelligent solutions always support your security and networking strategies and objectives.

IN EVERY PART OF YOUR FACILITY.

Throughout your facility, from visitor management to network security, you'll find Vector Security Networks solutions.

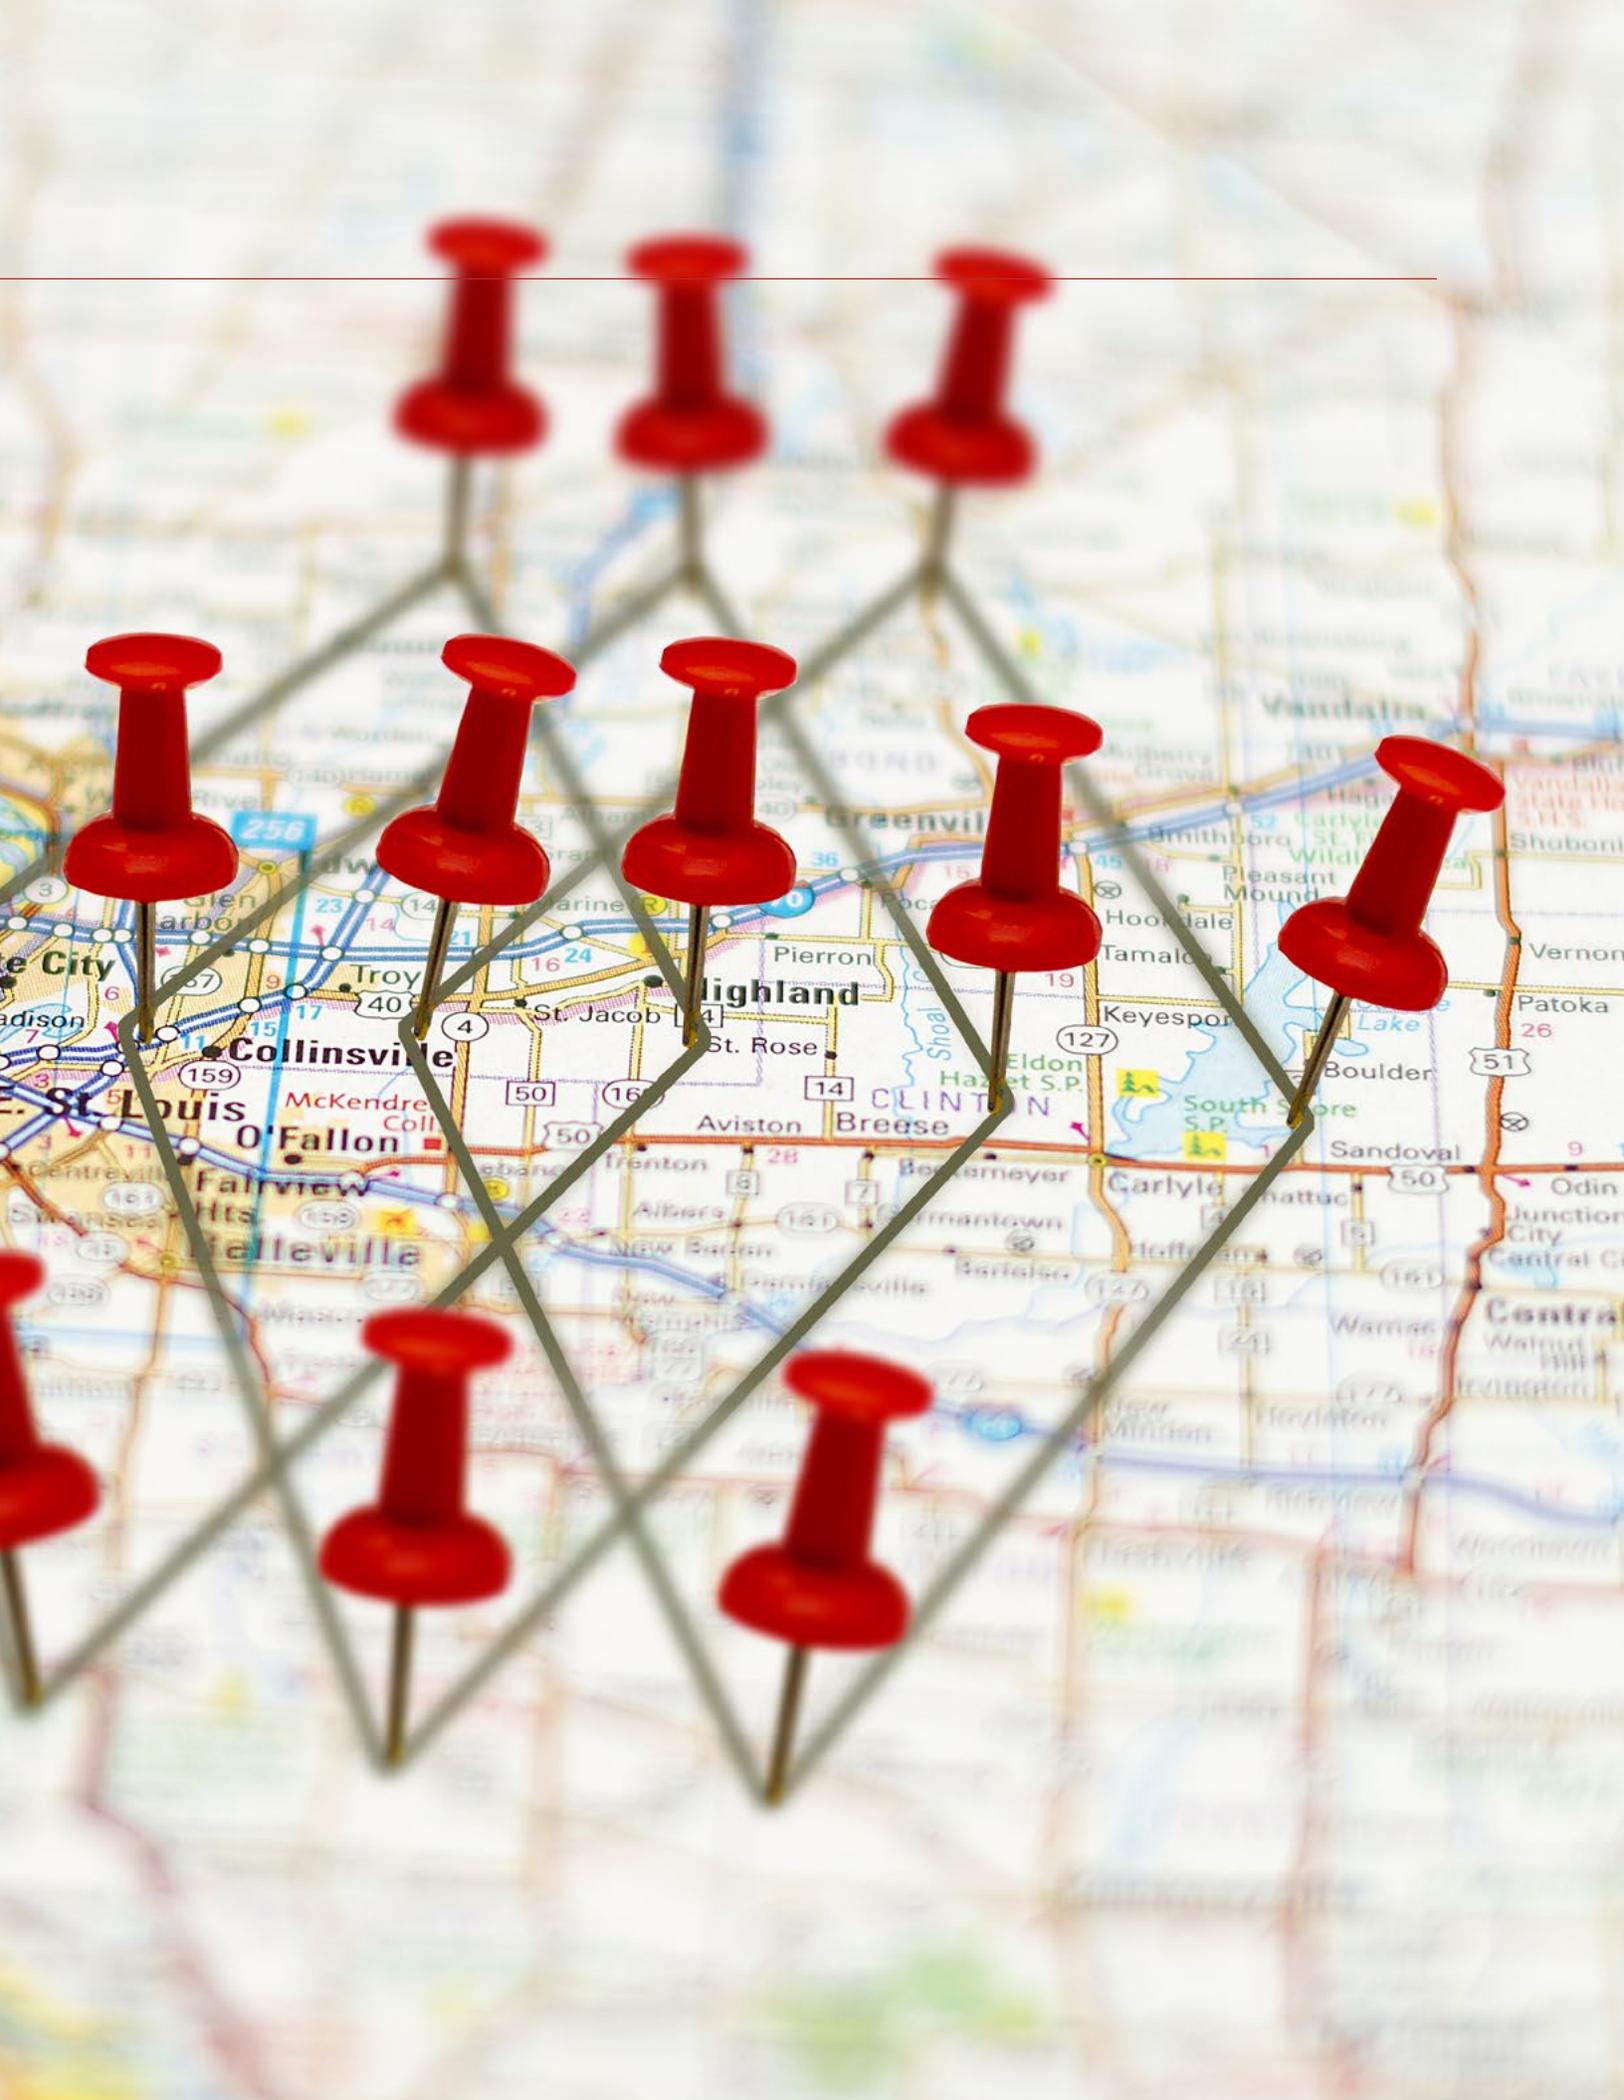

Video surveillance strategically positioned throughout your facility not only as a crime deterrent or to monitor and archive security events, but to ensure policy compliance and improve the efficiency of your operations.

Access control eliminates the need for keys and provides management of entry to critical areas of your facility, including drug storage, records rooms and server areas. The centralized control and reporting also simplifies compliance and audits.

Alarm services provide 24/7 fire and security monitoring of sensitive areas and reduce expensive false alarms. Additionally, we provide business intelligence that spots trends for you and tells you when to take action.

Managed networks that include high-performance broadband, secure/guest Wi-Fi, VPNs for corporate and vendor access, IoT and BYOD segmentation. We also provide SD-WAN as well as network resiliency and redundancy solutions to address all of your security, regulatory and compliance issues.

Perfectly fitted solutions.

Vector Security Networks uses its experience designing solutions for the healthcare market to ask the right questions, listen to your answers and tailor the right solution to meet the requirements of each facility—allowing you to grow and adapt to your ever-changing needs.

We take into account your location(s), the number of facilities, employee needs, patient needs, and any other important information. In working with you, we may discover that a combination of proper placement of surveillance cameras and tighter control of entry access are all that's needed to meet regulations and ensure a safer environment. Or, your needs may require more cost-effective and agile broadband solutions that delivers greater network security as well as a secure guest Wi-Fi.

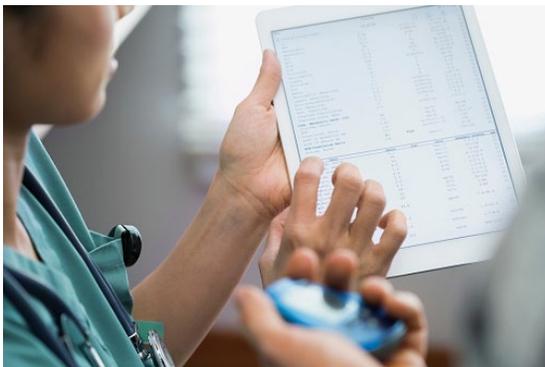

We're your partner. You remain in control.

With Vector Security Networks as your partner—regardless of the number of sites involved—you're in the driver's seat. We are your partner, not just a vendor. We advise, but ultimately you decide.

We work *with* you to create a security and network solution that makes sense for your business. All of our products and services are chosen by you, under our guidance, ensuring complete visibility and management control over your facilities.

We help train your employees to adhere to security protocols and standards. That means more than just knowing how to best use the equipment, it also means applying industry best practices, such as addressing incidents of *immediate jeopardy* and stopping the tailgating of authorized personnel into secure areas.

Best in class physical security.

Traditionally, healthcare security covers visitor management and camera installation. Vector Security Networks goes beyond the basics to support a range of best practices and value-added services, including:

- Restricting access to operating rooms and medicine closets with access controls such as proximity readers.
- Receiving alerts indicating that a security sensitive area has been accessed.
- Installing monitored alarms to ward off intruders and immediately alert emergency personnel.
- Positioning surveillance cameras near entrances and hallways to discourage theft, violence or other criminal activities.

We can help you put the appropriate security devices and policies in place, so your healthcare providers can focus on treating patients. With Vector Security Networks your employees know they are working in a safer and more secure environment.

The right managed network.

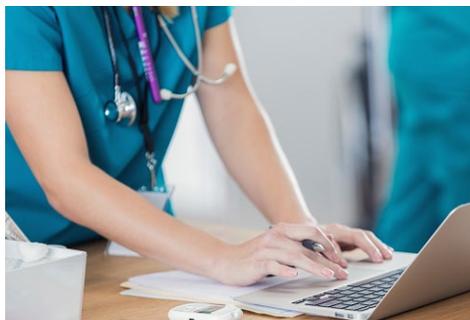

To cyber thieves, healthcare facilities are a virtual goldmine. Digital assets such as health records, payment information and other protected health information are key targets for them. This information can be monetized upwards of ten times the value of credit card information. And losing the information comes at a great cost to healthcare facilities, not just monetarily from fines, but also from a brand reputation perspective.

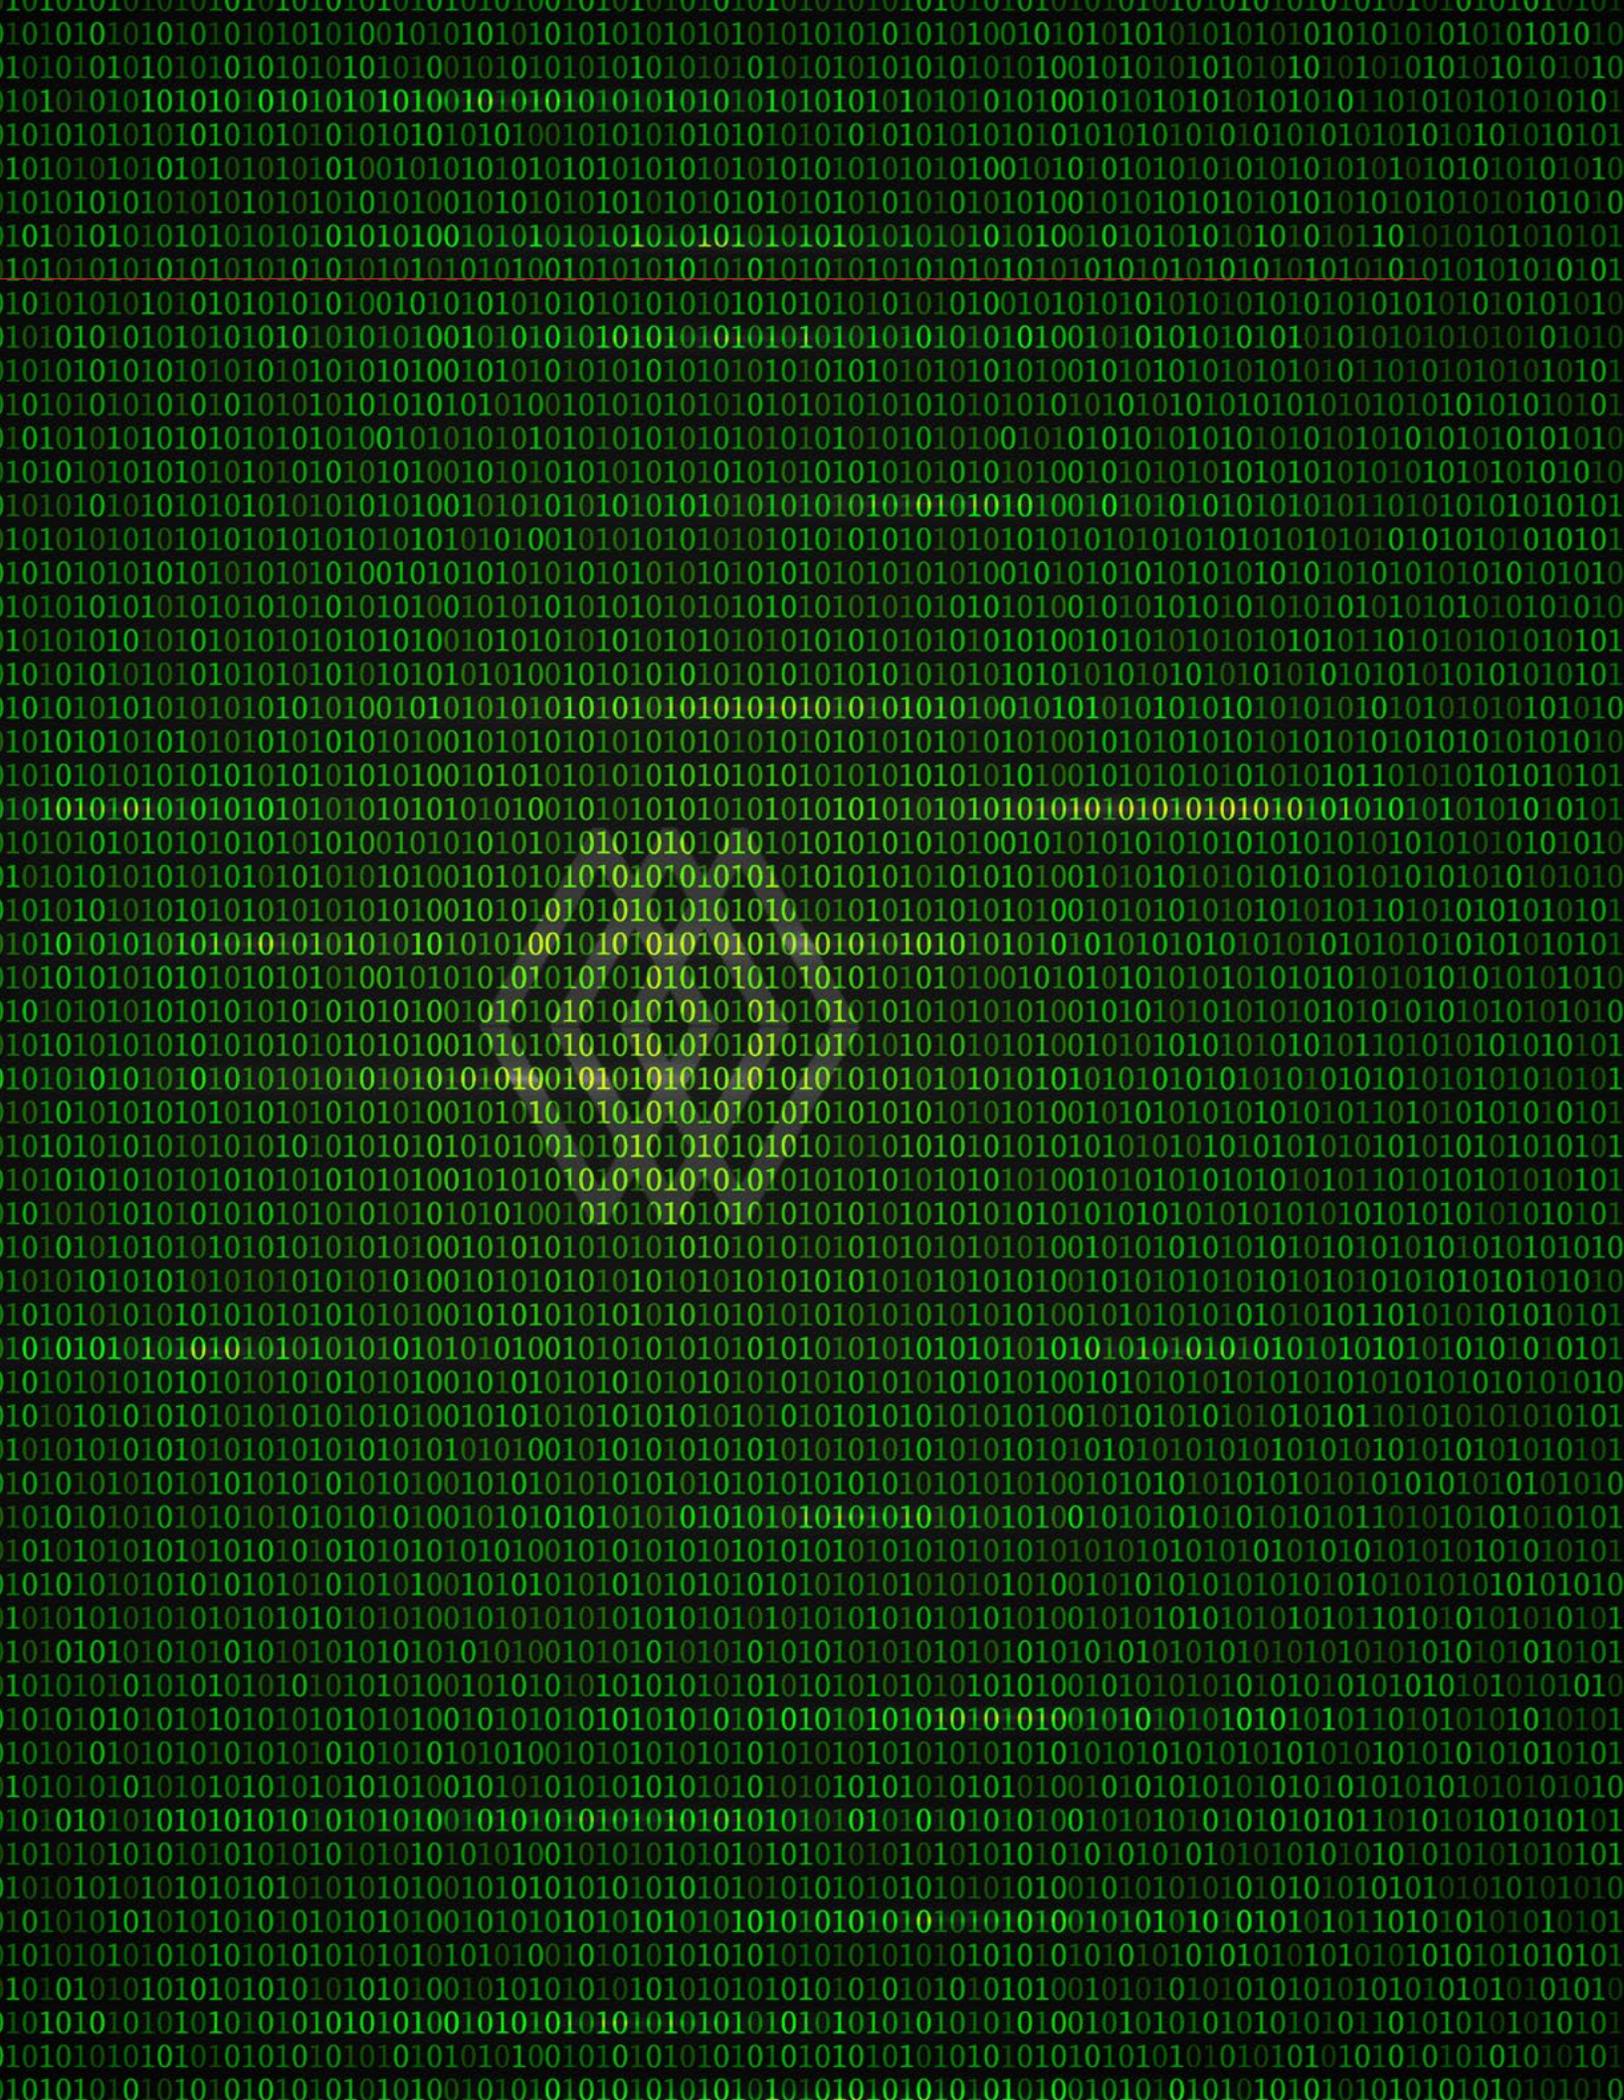

You can employ some industry best practices such as backing up files in separate and secure locations, password protecting individual devices and limiting health data disclosures to the patient and authorized users.

Behind the scenes, however, what you really need is the right managed network for your specific requirements. With Vector Security Networks, your managed network will provide additional layers of security to help protect against potential—and inevitable—hiccups in even the best security plans.

Benefit from:

- High-performance broadband and SD-WAN
- VPNs for Corporate & Vendor Access
- Improved Performance of Cloud Services
- Segmented Networks for IoT/BYOD
- Network Resiliency/Redundancy
- Guest Wi-Fi/Secure Wi-Fi
- And much more

Measuring up to industry regulations.

Healthcare security cuts across numerous legal, legislative and industry frameworks. Vector Security Networks works closely with you to ensure your facility meets every industry regulation.

- HIPAA
- OSHA
- HITECH
- UCA
- NRAA
- IAHSS
- CMMS Rights of Participation
- Joint Commission Accreditation
- NFPA Hostile Event Standards
- And more

Additionally, facilities are required to secure Protected Health Information (PHI). To ensure this data is safeguarded, physical security and secure networks must be properly implemented at all facilities. Computers and other smart devices must be properly protected to secure patient files, records and data.

From strategic placement of video cameras, to the proper programming of access cards, to the business intelligence provided on our proprietary analytics interface, Vector Security Networks ensures that your physical security and managed network solutions address the healthcare industry's ever-changing regulations, now and into the future.
